Is there any way the county can have the developer/builder keep the roads clean. There is a constant flow of trucks into the building site and when they come out the tires are full of mud leaving a trail all the way to Chunns Cove. The builder has a tractor with a brush just parked at the entrance and never uses it. Every car that passes picks up the mud and makes a mess coming into our property at Pine Cliff Condos.
Also the engineer who designed the erosion control has all that water just dumped into the street. Every time it rains there is a mess. That water should be trapped and diverted from the street. Please have someone investigate and correct the problems.
