Subject: Re: Looking for help with CSS/templates for City of Asheville web applications

Hey, Lauren,

Just wanted to check in on this. Since we will need to have this done pretty quickly (we'll be building some starter dashboards for the April 12 CfA meeting that need it), want to make sure that if this isn't possible with PRC, we can figure out an alternative quickly.

Thanks,

Eric

Hi, Lauren,

I chatted briefly with Jesse the other day about the possibility that PRC Apps might help us develop style templates and components for web applications that we develop. You can find a brief description [here](#), but feel free to ask Frances and me if you have further questions.

While there may be longer-term work on this, our immediate goal is to define some good basic templates by April, when we'll be inviting folks at Code for Asheville to develop their own dashboards using SimpliCity and City data.

Let us know how we should proceed.

Thanks!

Eric
