Attached please find a scan of the approved grading permit amendment #1 for the subject project encompassing revisions to the proposed stormwater drainage system design. The hard copy approval may be picked up Monday at the Permit Application Center. Please forward this information to the construction contractors.

Please note that this amendment approves the revised design of the proposed stormwater drainage system and authorizes installation of the system components only within the bounds of the associated property parcel.

Revisions to the stormwater encroachment agreement are still in process. Approval of that agreement will then authorize installation of the system components within the public right-of-way and connection of the proposed system to the City's existing stormwater infrastructure.

Please do not hesitate to contact me if you have any questions or need additional information.

Sincerely,

Marcus
