In order for the handhelds to be able to talk to the Luke meters to be able to display which spaces are expired or paid we need this module.

Apparently we had not made or finalized our plans about the new Lukes/Passport when Ellen configured our quote.

We need to get this added to the PO.

We also need to pay them about \$400 for the ability to do Secure FTP, but maybe that can be done on a small purchase. We also haven't finalized whether our old receipt printers and cash drawers will need replacing - but we can probably get them cheaper online.

Hi Cathy and Pat -

Per our conversation on Friday, attached is a quote for the AIMS Enforcement API. This will enable real-time communication between multi-space meter, pay-by-phone and LPR systems for enforcement.

Let me know if you have any questions.

I wish you both a fantastic Thanksgiving!

Ellen
