See attached. I stand corrected on S. Saunders at I-40 EB ramp. There was a count from just a few months ago.

MLK at Dawson – 11/6/2014

MLK at McDowell – 11/13/2014

MLK at Sal/Wilm – 12/18/2014

S. Saunders at Maywood – 8/6/2015

S. Saunders at I-40 WB ramp – 12/18/2012

S. Saunders at I-40 EB ramp – 11/7/2019

S. Saunders at Carolina Pines/Pecan – 11/4/2015

S. Saunders at Ileagnes – 8/4/2015

Wilm at City Farm – 8/5/2015

Wilm at Fayetteville – None

Wilm at Pecan – 7/28/2015

Wilm at Ileagnes – 7/24/2015

Let me know if you have any questions.

Thanks,

Bobby

At this point, please send whatever you've got. We'll review it and see if it makes sense to try to grow those volumes, balance them with existing counts, or use them as a starting point for developing volumes from the model.

Thanks,

Travis

Subject: RE: [External] Downtown South

All:

I want to weigh in on a few items. First, with regard to the South Saunders background development, I think we can take that off the table. It was a rezoning and I am not aware of a site plan submittal as of now. Therefore, the trip gen provided for that rezoning would not accurately portray what may or may not be built there and I believe would not be appropriate to include in a background scenario for this rezoning. I would suggest that it is mentioned in the submittal you eventually provide though.

Second, one item we did not discuss is a special event trip generation/plan. As with the above, I don't think this needs to be handled in detail (just a short discussion) in the rezoning for this project. But be aware that we will look for specific details at site plan.

And lastly, I was not able to find recent (≤ 3 years) TMCs for any of the study intersections. There were maybe 5-ish that had the most recent count in 2015. Travis – are you comfortable with 2015 counts being helpful for turning movements? Do you or NCDOT have thoughts on using TMCs prior to 2015 for providing a best guess for turning percentages?

Thanks,

Bobby

Even if it's over 3 years, we can use it as a baseline for developing turning movements from the regional model.

Clarence,

I apologize for the lack of explanation but what I meant to ask was whether or not NCDOT or the City has been able to find historical count data in the study area from the past 3 years that we would be able to use for this analysis.

Thanks,

Tyler,

I don't think we can collect accurate counts until the pandemic recommendations have been lifted. There's just no way to assume they're accurate without a very pessimistic view of the future.

We are open to any ideas on generating information for a study though. So please don't be afraid to think out of the box.

Thanks,

Clarence

All,

Attached is a summary of the TIA scoping call for Downtown South from 3/19/2020. Has there been any update on whether or not traffic count data has been able to be obtained in the study area?

Let me know if you have any questions.

Thanks,

A diagram of a 24-hour clock face. The top half is labeled 'AM' and the bottom half is labeled 'PM'. The clock face is divided into 24 segments, each representing an hour. The segments are arranged in a circle, with 'AM' on the left and 'PM' on the right. The segments are labeled with their respective hours: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12. The segments are arranged in a circle, with 'AM' on the left and 'PM' on the right. The segments are labeled with their respective hours: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12.

PM	1717	

A diagram showing a 2D grid. On the left, there is a horizontal row of three squares. Below the first square is the label 'AM', below the second is 'LU', and below the third is 'PM'. To the right of this row is a vertical column of three squares. To the left of the top square of this column is the label 'AM', to the left of the middle square is 'LU', and to the left of the bottom square is 'PM'. A small triangle is positioned to the left of the first square of the horizontal row, and another small triangle is positioned above the top square of the vertical column.
